HOW TO GROW CARROTS

1. Seed

We worked with seed breeders in Japan for more than six years to develop this carrot variety, specially suited to our subtropical climate.

2. Planting

Work your soil so it's nice and soft. Plant your seeds into a raised soil bed with lots of growing space between each seed.

6. Washing

Wash the dirt from your carrots and store them in the fridge until you're ready to eat them.

5. Harvesting

We use a mechanical harvester to pick the carrots. At home, dig into the ground to loosen the soil and then pull the carrots gently by the green tops. Pull 4-5 at a time.

3. Growing

A carrot takes between 100 and 140 days from planting to be ready for harvest. In Queensland, carrots are a winter crop.

4. Water & Sunshine

Make sure your carrots have regular drinks and enjoy lots of sunshine.
